SEDS (Standardized Extract of Dalbergia sissoo) Drug for Bone Fracture Healing

- It is derived from a Natural Product which has been in use since centuries, thus efficacy is time tested
- Source material is the leaves of Dalbergia sissoo. Since the tree is deciduous, raw material is freely available without damaging the tree itself.
- The leaves of sheesum which are not usually economically exploited and the tree yields cost only after it is felled. Now the new utility of its leaves will make this tree a regular income generator.
- Healing time curtailed by 30-40%. Since bone fracture incapacitates the patient for weeks, jeopardizing his economic activities leading to financial loss, quick healing is the urgent need, this drug can heal fracture much faster.
- Post-menopausal women are vulnerable to osteoporosis and frequent bone fracture. Since women are the backbone of any household, an effective drug for osteoporosis is very much helpful
